

**Matching clinician availability  
to patient needs, in real-time**

**Doc Abode is a real-time clinician deployment platform that safely connects and matches a multi-disciplinary clinical workforce to NHS patient needs based on:**

### **AVAILABILITY**

### **PROXIMITY**

### **EXPERTISE**

Clinicians set their availability via a secure Doc Abode app which allows healthcare providers to 'push' home visit and telephone triage requests to them directly.

#### **For Clinicians**

It provides a sustainable, motivating pattern of work, encouraging increased participation.

#### **For Healthcare Providers**

It opens up access to a wider, more flexible workforce, improving operational resilience and efficiency, reducing clinical risk and minimising unscheduled hospital attendances.

#### **For Patients**

It delivers speedier, more personalised care, improving their experience and outcomes.

Doc Abode has been developed within the NHS, with a range of NHS providers and a leading NHS clinician as CEO to support cross-organisational collaboration, efficiency and workflow integration between primary, community and urgent care providers.
